

Manas Goel

+91 7456024482 manasgoel2003@gmail.com HackerRank — GitHub — LeetCode

Objective

Aspiring Big Data and Machine Learning Engineer with strong foundations in distributed computing, SQL, and data pipelines. Experienced in building scalable data systems and analytical solutions using Hadoop, PySpark, and Machine Learning techniques. Seeking entry-level roles where data engineering and ML-driven insights are applied to large-scale, real-world datasets.

Education

Centre for Development of Advanced Computing (CDAC), Noida Ongoing

PG Diploma in Big Data Analytics

Key Modules: Hadoop Ecosystem, Spark, NoSQL, Data Warehousing, Data Ingestion

DIT University, Dehradun 2021 – 2025

B.Tech in Computer Science & Engineering

CGPA: 7.11

Technical Skills

Big Data Ecosystem: Hadoop, HDFS, Hive, PySpark, Apache Spark, MapReduce, YARN

Machine Learning: Supervised Learning, Unsupervised Learning, Feature Engineering, Model Evaluation

Programming: Python, SQL, Bash/Shell Scripting, Java (Basic)

Databases: MySQL, MongoDB, TiDB (Distributed SQL), PostgreSQL

Tools & Cloud: Git/GitHub, Power BI, Render, Vercel

Core Concepts: ETL/ELT Pipelines, Data Modeling, Query Optimization, Data Warehousing, OOP

Projects

Serverless Distributed SQL Platform (Data Engineering Focus) — GitHub

Python, TiDB, SQL Parsing, Vercel

- Developed a serverless query interface supporting distributed SQL databases (TiDB) and relational data sources.
- Implemented automated data connectors to securely connect Vercel-hosted database endpoints.
- Built a lightweight data visualization layer for analytical summaries.
- Optimized SQL parsing and execution workflows, improving query processing efficiency by **40%**.

Healthcare Data Pipeline & Prediction System — GitHub

Python, Pandas, Scikit-learn, FastAPI

- Built data cleaning and preprocessing pipelines for structured healthcare datasets.
- Integrated Machine Learning models with FastAPI for low-latency inference.
- Streamlined data preprocessing and model inference workflows, achieving a **60% improvement** in processing efficiency.

Gym Membership Management & Analytics System (Client Project) — GitHub

Python, SQL, Pandas

- Developed a custom gym membership management system for a real client, managing member records and subscription plans.
- Designed a normalized relational SQL database schema to ensure data consistency and integrity.
- Built Python-based ETL workflows using Pandas for data cleaning, validation, and transformation.
- Optimized data processing and analytical query workflows, improving reporting and insight generation efficiency by **40%**.
- Delivered structured datasets and analytical outputs aligned with client business requirements.

Experience

Freelance Backend & Data Tool Developer

2023 – Present

Roorkee, Uttarakhand

- Engineered a custom SQL execution engine in Python, reducing query latency by 40%.
- Implemented multi-threaded data fetching for efficient large-scale data processing.
- Designed data processing layers connecting MySQL and SQLite for real-time validation.
- Maintained clean Git workflows with modular code structure and documentation.

Certifications

- SQL (Advanced) Certificate — **HackerRank**
- Software Engineer Certificate — **HackerRank**
- Problem Solving (Intermediate) Certificate — **HackerRank**
- Software Engineer Certificate — **HackerRank**
